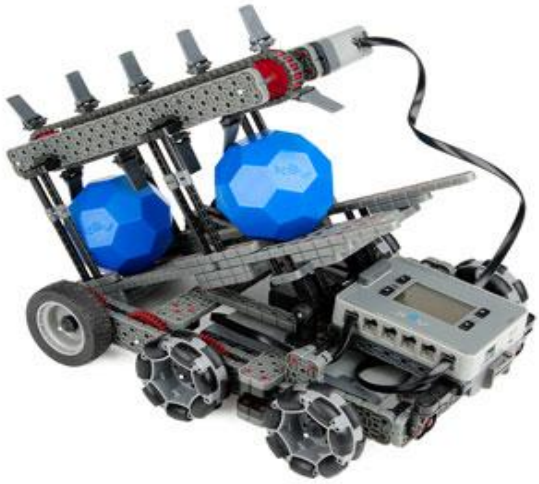
At Balboa Magnet Elementary

VEX IQ is a robotics platform that aims further STEM (science, technology, engineering, and math) learning beyond the classroom.

Students can build robots with snap-together pieces and a simple programming language.



Students can learn basic physics and engineering principles through hands-on experiences by participating in the **VEX IQ Challenge**.

The **VEX IQ Challenge** is an engineering challenge presented in the form of a game. Through careful analysis and problem solving, students will build robots to solve the game challenge.

This program will be open to 4th and 5th graders only. Supervisors will be Ms. Bronson and Ms. Chun as well as Granada Hills Charter High School's Robotics Team.
We will meet in Room 19.

If you are interested in the VEX IQ program, please tear this off and return to your teacher by **Wednesday, October 16th**.
